- Intelligent design / 3D technology
- Home / Office Interiors

Who we are

eak-design was founded in 2000 by Atila Kahraman and is today an architectural firm, which stands for unique architecture with a focus on innovation, technical skills and artistic development.

What is our mission

The mission is to develop a building culture that positively affects the world in which we live - both architecturally and environmentally

Principled approach, global reach

Our Staff

eak-design is a Copenhagen based architecture studio with the Staff who has skills are related to the requirements and possibilities drawn up by the company. It is not sufficient for the company to focus only on the qualities of the individual member of staff; we also focus very much on the environment in which the staff member operates.

Our Office support equipment's

Eak-design equipped with 3D technology - Architecture Revit and Autodesk Architecture 2012

Design smart

eak-design believes in technological progress, and feels that the major paradigm shift which has been enabled by 3D project planning is comparable to the revolution brought about by the invention of spatial perspective in the 15th century. We actively cultivate innovation as a key element in all our projects, and we expect that technological progress in construction, together with globalization, will create entirely new building types in the 21st century – building types that we are looking forward to designing. We call it "Design Smart".

Unique architecture

We create unique architecture.

Because we have wide experience of user consultation.

Because we have the latest techniques in sustainable construction at our disposal.

Because we employ 3D technology.

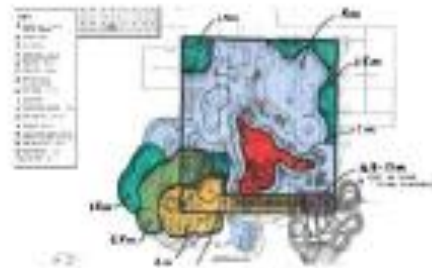

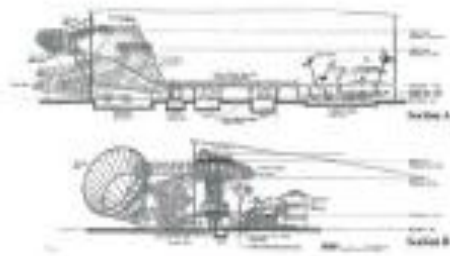

Because we are locally based in Copenhagen, respectively, and globally based in Turkey.

Because we secure a professional, stable and innovative process during drafting and project planning.

Because we have broad experience in financial project management, and

Because we are inquisitive, innovative, experienced and possess a great ability to empathize.

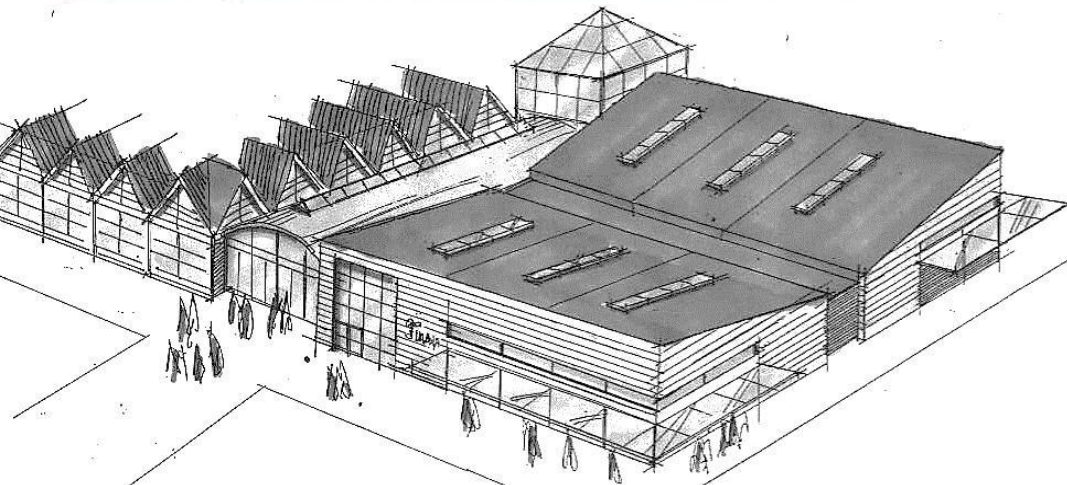

Our goal is to create value for our customers, for the users and for society as a whole.
